SWISS SOLAR Pro.

2021 são tomé und príncipe sol arkontainer-verbesserungsplan

Überblick

The government wants to have programs aimed at implementing an energy model based on economic rationality and on sustainability, though, combining the use of energy from endogenous renewable sources, particularly solar and hydropower generation, on the one hand, and reducing the extra. On one hand, global climate change poses a direct threat to our way of life; on the other, continued reliance on outdated fossil energy sources, uch as imported diesel, is no longer sustainable. The objective of the STP Government is to maximize efforts to ensure adequate power generation and distribution to all sectors in order to boost the country's socio-economic growth. As a small island developing state (SIDS) highly vulnerable to climate change, São Tomé and Príncipe is taking ambitious and concrete steps to mitigate greenhouse gas emissions while also prioritizing adaptation and resilience building. Significant development challenges in how to reconcile the different streams of development objectives and investments. São Tomé & Príncipe – threats to biosphere outstandinglevels of endemismo: ‘Galapagos of Africa’ high levels of poverty & exponential growth in demography unsustainable land-use.
