Windkrafterzeugung in guangdong

Überblick

Guangdong, a major energy consuming province in South China, will further increase efforts to develop non-petrochemical energy sources, promoting the construction of large-scale offshore wind power plants to achieve its energy conservation and carbon reduction targets in 2025. According to GlobalData, who tracks and profiles over 170,000 power plants worldwide, the project is currently active. On December 11th, the world's largest single-unit capacity floating wind farm was officially commissioned in Yangjiang, Guangdong Province, marking a new chapter in exploring deep-sea energy resources. The platform, independently developed by Mingyang Group, is a global first, featuring two. Today, China is harnessing it on an unprecedented scale, transforming its coastline into the world’s largest clean energy engine.
